

Cloud Computing Project

CustomGPT

—

Bingi Adhitya Rajesh
21cs3011

Project details

Objective is to create a customized GPT based Chatbot that can be trained on your own data files

Technology Stack

Application Frontend: Flutter

Cloud(SaaS): Firebase - for authentication and Cloud Storage

LLM Framework: Langchain

API: OpenAI GPT-3.5

Framework: Flask (For running on Local host in development stage)

Use cases

- Intelligent data Interpretation
- Summary tool
- Research purpose tool
- Data analysis of small business

— Conclusion

The CustomGPT chatbot application will be developed by using Langchain framework and Firebase SaaS service with flutter frontend.

Langchain

An open source framework that allows AI developers to combine LLMs like GPT-4 with external sources of computation and data.
